SUMMARY

Computer science student at Carleton University with experience developing fullstack web applications and desktop software. Available for the Summer 2025 Co-op work term.

EXPERIENCE

Software Developer Co-op

May 2024 - Dec 2024

Lim Geomatics

Ottawa, Canada

- Created a backend for a new web application using a RESTful ASP.NET API, SQL Server, and Angular frontend to unify several software services and integrate data collection from hundreds of clients
- Developed cross platform software using Flutter, C#, .NET, and Xamarin for forestry applications, implemented wireless communication endpoints to facilitate real time device to device communication as well as satellite communication
- Operated CI builds and deployments with Azure DevOps, managed my workflow with Jira, documented new steps in development troubleshooting, and participated in an agile development environment

Undergraduate Research Intern

May 2023 - Apr 2024

Carleton University

Ottawa, Canada

- Planned and implemented a Python program capable of reading open street map data and converting it into graph data resulting in better training for the adjacent neural network
- Researched various Python libraries to augment my program (Numpy, Rtree, professor created) resulting in a more efficient script
- Communicated with my professor and other lab researchers to plan and execute various optimizations which increased program efficiency and bettered personal communication skills

Co-Vice President, Technology Support

Mar 2024 - Present

CA2RC-SAT Club

Ottawa, Canada

- Developed robust C++ code as a member of the Carleton Aerospace, Astrophysics, and Radio Club resulting in a successful weather balloon launch which recorded data during a solar eclipse
- Designed tests to maintain a high level of reliability for embedded software as well as the various data-gathering components present

TECHNICAL SKILLS

Languages: Java, Javascript, C, C++, C#, Python, SQL, HTML, CSS

Technologies: .NET, Node.js, Express.js, React, Flutter, Jira, git/github, Visual Studio, Azure, MongoDB, Linux

EDUCATION

Carleton University

Ottawa, Canada

Bachelor of Computer Science, Honours, Co-op Option

2022 - 2027 (expected)

- CGPA 11/12
- Awarded 2023 Dean's summer research grant

PROJECTS

Real-time Transit Website | *Javascript, Node.js, Express.js, Bootstrap, SQLite*

- Programmed a functional transit tracking website displaying real-time transit information on Ottawa's O-line train with the transit.app API
- Used an SQLite database to store user preferences and credentials for token based authentication

Space Apps 2024 Hackathon | *Flask, React, SQL, Google Earth Engine*

- Developed a fullstack web application for users to visualize NASA Land-Sat geographic data using inputted parameters with ground imagery and interactive charts
- Integrated with the Google Earth Engine API, and stored user queries in SQLite database for retrieval
